## LMD-2451MD

Medical LCD Monitor

For over 20 years, Sony has been a trusted and reliable resource for surgeons, offering high-quality monitors with exceptional picture quality for a variety of medical applications. Now, Sony is proud to introduce the LMD-2451MD - a 24-inch (measured diagonally) full HD widescreen medical LCD monitor - to its comprehensive medical-grade display line-up.

The LMD-2451MD features two unique built-in option slots for ultimate flexibility, allowing users to easily expand, select, and change input/output signals depending on the modality application. These built-in option slots are designed to support a variety of option boards such as the BKM-250TGM, which enables the monitor to accept a 3G-SDI input signal and transfer a 1080/60p signal via a single SDI cable. Use of the optional BKM-256DD board increases the monitor's DVI input/output capability to accept up to two DVI-D inputs and one DVI loop-through output. In addition, the LMD-2451MD also provides a Picture-and-Picture function that can accept two DVI-D inputs.

Its unique built-in option slots and easy-to-install body design allow this monitor to be smoothly integrated into any environment such as an OR, conference room, and learning center, making it the ideal choice for today's demanding medical applications.

# Features

## Flexible Input Configuration

The LMD-2451MD is equipped with two built-in option slots, which greatly expand the variety of input signals the monitor can accept. This allows users to easily select and change input/output signals for ultimate flexibility via a variety of available option boards.

### BKM-256DD Optional Input adapter

By installing the optional BKM-256DD board in the monitor's expansion slot, users can employ a maximum of two DVI inputs and one loop-through output in a standard configuration.

- **Equipped with DVI Signal Level Stable Circuit**

The BKM-256DD is equipped with an equalizer circuit that enables the transfer of input signals over a long distance without signal deterioration. For optical fiber transmission, the 5 V power required to convert a signal from electric to optical is supplied from each 14-pin input and output connector.

## Multi Picture-and-Picture Capability

In accordance with the growing demand for enhanced functionality, the LMD-2451MD provides a combination of inputs and outputs for Picture-and-Picture display. With the optional BKM-256DD, the monitor can display two images of DVI input signals at the same time. It also offers Side-by-Side mode with vertical full scan, to make it easier to diagnose captured images. These flexible display modes are convenient when displaying images from an ultrasound, endoscope, X-ray, and more. Besides, the feature is convenient to check captured images by a printer.

## excellent Picture reproduction

### Chromatru Color Processing

For the highest level of color reproduction accuracy, every LCD panel used in the LMD-2451MD is precisely color calibrated at the factory, providing consistent characteristics. This technology is invaluable for applications such as simultaneous monitoring in operating rooms and monitoring rooms.

### excellent Brightness and Contrast (WUXGA panels)

The LMD-2451MD offers highly bright and high-contrast images with a wide viewing angle by utilizing super-wide aperture WUXGA LCD panels.

### Natural Gradation and accurate Color reproduction (10-bit DsP)

The LMD-2451MD adopts an advanced full 10-bit digital video signal processor to produce accurate and lifelike images with smooth and natural gradation.

## Operational Convenience

### Gamma Curve selection

Users can choose from two gamma curves, DICOM or CRT 2.2, depending on their needs.

### Mirror Image

The LMD-2451MD can reproduce a full-screen size, reverse image. This feature is ideal for procedures where two surgeons work at opposite points of orientation to the patient in applications such as thoracoscopic surgery, laparoscopic surgery, and more.

### selectable scan size/ aspect size

The LMD-2451MD has a native display mode in which 1080/60i signals are displayed on a pixel-to-pixel basis without a scaling process. Therefore, this monitor achieves faithful image reproductions that are not influenced by signal deterioration incidental to the process. Moreover, there are various image scan modes - such as 20% Overscan mode, Full Scan mode, and Vertical Full Scan mode - of the Picture-and-Picture function, allowing users to select the most suitable scan size.

### Protected Controls

The key-inhibit function helps prevent inadvertent operation on the control panel. Users can execute this function either by the OSD menu or a control button.

### Mounting Flexibility (Vesa)

The LMD-2451MD complies with the 100-mm hole spacing VESA mounting standard, making it ideal for use with surgical equipment arms.

## available HD15/DVI/BKM-256DD input signal format\*

### about the preset signal

This unit has a preset memory for signals connected to the HD15 and DVI input connectors, and BKM-256DD. When a preset signal is input, the unit automatically detects the signal type and recalls the data for the signal from the preset memory to adjust it to an optimum picture. This unit is applicable to the following preset signals.

### For the single display

#### Range of HD15 input signal ( for Preset 1)

##### VESA DMT

Resolution	Dot clock [MHz]	fH [kHz]	fV [Hz]	Sync. polarity
